## **Foxwood Builders, Inc. – First Reported Indoor airPLUS Builder in their Service Area**

[WAKE FOREST, NC] – Foxwood Builders, Inc. is proud to announce they are the first reported Indoor airPLUS certified home builder in their service area of North Carolina. Through their partnership with the U.S. Environmental Protection Agency's (EPA) Indoor airPLUS Program, Foxwood Builders has committed to continue building and promoting Indoor airPLUS qualified homes that provide homeowners with improved indoor air quality.

The Indoor airPLUS Program is a partnership between EPA, home builders and other industry allies, to improve indoor air quality in new homes. Indoor airPlus qualified homes are healthier by design and independently verified to meet strict construction specifications, through more than 30 additional home design and construction features. These features help to protect homeowners by reducing contaminants that lead to poor indoor air quality.

Elizabeth Ruzzier, President of Foxwood Builders states: *"We feel that building beautiful homes with great floor plans is not enough. We want our customers and their families to live in a healthier home as well"*.

Indoor airPLUS qualified homes offer homebuyers the standard features of a new home, plus moisture control, radon control, pest barriers, improved heating, ventilation and air conditioning (HVAC) systems, combustion pollutant control, low emission materials and third party verification. All Indoor airPLUS qualified homes also meet guidelines for energy efficiency set by ENERGY STAR<sup>®</sup>, the nationally recognized symbol for energy efficiency.

"Builders who construct Indoor airPLUS qualified homes are committed to prioritizing the health of their homeowners and creating a healthier home environment. The success of Indoor airPLUS hinges on our partner organizations and the work they do to support this important EPA program. Together we're improving indoor air quality in new homes around the country," said Dave Rowson, Director, Indoor Environments Division, Office of Radiation and Indoor Air, EPA.

After purchasing a home with the Indoor airPLUS label, owners receive a checklist of verified indoor air quality features, and instructions for operating and maintaining equipment to continue minimizing risks of indoor air quality problems.
